

I claim:

1. A personal device shoulder harness system for carrying personal item [s] on the upper torso of the wearer, and the device comprising:

Of one continuous strip of material.

Each end of this single continuous strip of material shall have a coupling means including a hook and loop fastening fabric material, a button snap system, and a buckle-type latching system or other facsimile coupling apparatuses.

Said apparatus may be adaptable to also be conducive to adjustments for comfort by the wearer.

2. The personal device shoulder harness system as set fourth in claim 1 further comprising:

a d-ring apparatus, or facsimile, shall be located on the front of the closed loop [left] side, so the wearer may attach their personal item[s] of choice to be worn at or near chest level so as not to interfere with normal activities and still be radially accessible.

Said apparatus shall be attached to the one continuous strip of material with a rivet, or aluminum post with screw, or facsimile.

3. The personal device shoulder harness system as set fourth in claim 2 further comprising of an adjusting coupling apparatus, or facsimile, where the one continuous strip of material crisscrosses over the back of the wearer, and provides adjustment by the wearer for their own personal comfort.
